#### EMC and Safety Standards Applied

#### Product Name: TM-T88II

#### Model Name: M129B

The following standards are applied only to the printers that are so labeled. (EMC is tested using the EPSON PS-170 power supply)

Europe:	CE Ma Safety:	rking EN60950
North America:	EMI: Safety:	FCC/ICES-003 Class A UL 1950/CSA C22.2 No. 950
Japan:	EMI:	VCCI Class A
Oceania:	EMC:	AS/NZS 3548
Taiwan:	EMI:	Class B

#### WARNING

The connection of a non-shielded printer interface cable to this printer will invalidate the EMC standards of this device.

You are cautioned that changes or modifications not expressly approved by SEIKO EPSON Corporation could void your authority to operate the equipment.

#### **CE Marking**

The printer conforms to the following Directives and Norms

Directive 89/336/EEC	EN 55022 Class B EN 55024
	IEC 61000-4-2
	IEC 61000-4-3
	IEC 61000-4-4
	IEC 61000-4-5
	IEC 61000-4-6
	IEC 61000-4-11

Directive 90/384/EEC EN45501

#### FCC Compliance Statement

#### For American Users

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

#### FOR CANADIAN USERS

This Class A digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

#### GEREÄUSCHPEGEL

Gemäß der Dritten Verordnung zum Gerätesicherheitsgesetz (Maschinenlärminformations- Verordnung-3. GSGV) ist der arbeitsplatzbezogene Geräusch-Emissionswert kleiner als 70 dB(A) (basierend auf ISO 7779).

#### About This Manual

#### Setting Up and Using

- **Chapter 1** contains information on unpacking the printer and setting it up.
- **Chapter 2** contains information on using the printer.
- **Chapter 3** contains troubleshooting information.

#### Reference

- **Chapter 4** contains specifications.
- **Appendix A** tells how to change the DIP switch and paper near end settings.

#### Warnings, Cautions, and Notes

# Awarning:

Follow warnings carefully to avoid serious bodily injury.

# ACAUTION:

Observe cautions to avoid minor injury to yourself or damage to your equipment.

# Note:

Notes have important information and useful tips on the operation of your printer.

# Introduction

#### Features

TM-T88II Series printers are high-quality POS printers that can print on a paper roll. The printers have the following features:

#### Printing

- □ High-speed printing: 28.4 lines/second (4.23mm (1/6") feed) maximum.
- □ Low-noise thermal printing.
- □ High reliability due to a stable mechanism.

#### **Application Software**

- $\Box$  Command protocol is based on the ESC/POS<sup>®</sup> standard.
- □ Various layouts are possible by using page mode.
- □ Characters can be scaled up to 64 times as large as the standard size. Smoothing is also possible.
- □ Bar code printing is possible by using a bar code command. Bar codes can be printed both in the vertical direction (fence bar code) and in the horizontal direction (ladder bar code).
- **□** Repeated operations and copy printing are possible by using macro definitions.
- Character font size (12 x 24 font or 9 x 17 font) can be selected using a command.

#### Printer Handling

- **Easy** paper roll loading.
- □ An autocutter is standard.
- □ The printer allows easy maintenance for tasks such as head cleaning.
- □ Three different print densities can be selected by DIP switches.
- **□** The built-in interface provides control capability for two drawers.

## **Options and Accessories**

- □ EPSON power supply unit, PS-170.
- □ Affixing tapes (model: DF-10).
- □ RS-485 interface board can be installed as a dealer option.
- □ Wall hanging bracket set (WH-10).

# Chapter 1 Setting Up the Printer

#### Unpacking

The illustration below shows the items included for the standard specification printer.

#### Connecting the Cables and Grounding the Printer

You can connect up to four cables to the printer. They all connect to the connector panel on the back of the printer, which is shown below:

🔊 Note:

There is a caution label above the drawer kick-out connector. Depending on the interface installed, the interface connector on your printer may look different from the one illustrated.

Before connecting any cables, make sure both the printer and computer are turned off.

#### Connecting the computer

You need an appropriate interface cable.

1. Plug the cable connector securely into the printer's interface connector.

2. If the printer has a serial interface, tighten the screws on both sides of the cable connector.

If the printer has a parallel interface, squeeze the wire clips on the printer together until they lock in place on both sides of the connector.

3. Attach the other end of the cable to the computer.

#### Connecting the Drawer

Use a drawer that matches the printer specifications. Using an improper drawer may damage the drawer as well as the printer.

Do not connect a telephone line to the drawer kick-out connector; otherwise the printer and the telephone line may be damaged.

Plug the drawer cable into the drawer kick-out connector on the back of the printer next to the power supply connector.

#### Anschließen der Schublade

Eine für den Drucker geeignete Schublade verwenden. Bei Verwendung einer falschen Schublade kann diese oder der Drucker beschädigt werden.

Kein Telefonkabel an die Schnappsteckerbuchse anschließen, da sonst der Drucker und die Telefonkabel beschädigt werden können. Das Kabel der Schublade an die Schnappsteckerbuchse hinten am Drucker neben dem Netßzanschluß anschließen.

#### Grounding the Printer

You need a ground wire to ground your printer. Make sure the wire is AWG 18 or equivalent.

- 1. Be sure the printer is turned off.
- 2. Connect the ground wire to the printer using one of the FG screws on the back of the printer, as shown.

#### Connecting the Power Supply

Use the optional EPSON PS-170 or equivalent power supply for your printer.

Make sure you use the EPSON PS-170 power supply or equivalent. Using an incorrect power supply may cause fire or electrical shock.

When connecting or disconnecting the power supply from the printer, make sure the power supply is not plugged into an electrical outlet. Otherwise you may damage the power supply or the printer.

If the power supply's rated voltage and your outlet's voltage do not match, contact your dealer for assistance. Do not plug in the power cord. Otherwise, you may damage the power supply or the printer.

- 1. Make sure the printer's power switch is turned off, and the power supply's power cord is unplugged from the electrical outlet.
- 2. Check the label on the power supply to make sure the voltage required by the power supply matches your electrical outlet.
- 3. Plug in the power supply's cable as shown below. Notice that the flat side of the plug faces down.

To remove the DC cable connector, make sure the power supply's power cord is unplugged; then grasp the connector at the arrow and pull it straight out.

#### Installing or Replacing the Paper Roll

#### Note:

Be sure to use paper rolls that meet the specifications. Do not use paper rolls that have the paper glued to the core, because the printer cannot detect the paper end correctly.

- 1. Make sure the printer is not receiving data; otherwise, data may be lost.
- 2. Open the paper roll cover by pressing the cover-open button. If the cover-open button will not open the cover, see page 3-4 or 3-6 in Troubleshooting.

3. Remove the used paper roll core, if there is one.

4. Insert the paper roll as shown.

5. Be sure to note the correct direction that the paper comes off the roll.

6. Pull out a small amount of paper, as shown. Then close the cover.

7. Tear off the paper as shown.

### Using the Power Switch Cover

# A WARNING:

If an accident occurs when the power switch cover is attached, unplug the power supply cord from the outlet immediately. Continued use may lead to fire or shock.

You can use the enclosed power switch cover to make sure the power switch is not pressed accidentally. If you want to use this cover, install it as shown in the illustration below.

### Self Test

The self test lets you know if your printer is operating properly. It checks the control circuits, printer mechanisms, print quality, ROM version, and DIP switch settings.

This test is independent of any other equipment or software.

#### Running the self test

1. Make sure the printer is turned off and the printer covers are closed properly.

2. While holding down the FEED button, turn on the printer using the switch on the front of the printer to begin the self test. The self test prints the printer settings and then prints the following, cuts the paper, and pauses. (The PAPER OUT light blinks.)

Self test printing. Please press the PAPER FEED button.

- 3. Press the FEED button to continue printing. The printer prints a pattern using the built-in character set.
- 4. The self test automatically ends and cuts the paper after printing the following:

\*\*\* completed \*\*\*

The printer is ready to receive data as soon as it completes the self test.

*Note: If you want to pause the self test manually, press the FEED button. Press the FEED button again to continue the self test.* 

#### Adjustments and Settings

TM-T88II Series printers are set up at the factory to be appropriate for almost all users. There are, however, some settings for users with special requirements.

Your printer has DIP switches that allow you to change communication settings, such as handshaking and parity check, as well as print density.

TM-T88II Series printers also have a near-end sensor for the paper. This can warn you when the paper is almost out. If you find that there is not enough paper remaining on the roll when the near-end detector is triggered, you can change the near-end sensor setting.

See Appendix A, if you need to make any of these changes.

# Chapter 2 **Using the Printer**

#### Operating the Control Panel

You can control the basic paper feeding operations of the printer with the button on the control panel. The indicator lights help you monitor the printer's status.

#### **Control Panel**

#### Button

The button can be disabled by the ESC c 5 command.

Press the FEED button once to advance paper one line. You can also hold down the FEED button to feed paper continuously.

#### Panel lights

POWER

The POWER light is on whenever the printer is on.

#### ERROR

This indicates an error. See Chapter 3 for information on what to do when this light comes on.

#### PAPER OUT

This light indicates the near end of the paper roll. Install a new paper roll, and the printer will continue printing.

When the light blinks, it indicates the self-test printing standby state or macro execution standby state when the macro execution command is used.

# Chapter 3 Troubleshooting

#### Troubleshooting

This chapter gives solutions to some printer problems you may have.

#### General problems

The lights on the control panel do not come on.

Make sure the power supply cables are correctly plugged into the printer, the power unit, and into the power outlet.

Make sure power is supplied to the power outlet. If the outlet is controlled by a switch or timer, use another outlet.

#### **Printing problems**

#### The ERROR light is on (not blinking) and nothing is printed.

If the PAPER OUT light is **on**, the paper roll is not installed or is at or near the end. Install a new paper roll. See Chapter 1 for instructions.

If the PAPER OUT light is **off**, make sure the printer cover is properly closed. Press the printer cover until the cover audibly clicks into place.

#### The ERROR light is blinking and the printer does not print.

First, turn off the printer and check for a paper jam. (See the paper jam description on page 3-3.)

If there is no paper jam and the printer has been printing for quite a while, the print head may be overheated. If the print head is overheated, the printer will resume printing when the head has cooled (usually within two or three minutes).

If there is no paper jam and the print head is not overheated, turn off the printer and turn it back on after about 10 seconds. If the ERROR light is still flashing, contact a qualified service person.

#### The **ERROR** light is off, but nothing is printed.

Try to run the self test to check that the printer works properly. See the self test instructions in Chapter 1 to run the self test. If the self test does not work, contact your dealer or a qualified service person.

If the self test works properly, check the following:

- 1. Check the connection at both ends of the interface cable between the printer and the computer. Also make sure this cable meets the specifications for both the printer and the computer.
- 2. The data transmission settings may be different between the printer and computer. Make sure the printer's DIP switch settings for data transmission are the same as the computer's. You can print the printer's interface settings using the self test.

If the printer still does not print, contact your dealer or a qualified service person.

#### Printing is poor.

Paper dust on the heating element of the thermal print head can lower the print quality. Try cleaning the print head as described below:

#### Cleaning the print head

After printing, the print head can be very hot. Be careful not to touch it. Also let it cool before you clean it. Do not damage the print head by touching it with your fingers or any hard object.

- 1. Open the printer cover.
- 2. Clean the thermal element of the print head with a cotton swab moistened with an alcohol solvent (ethanol, methanol, or IPA).

#### Paper handling problems

#### Paper is jammed inside the printer.

Do not touch the print head because it can be very hot after printing continuously for a long time.

To clear a paper jam, follow the steps below:

- 1. Turn the printer off and press the cover open button to open the cover.
- 2. Remove the jammed paper, put the roll back in the printer, and close the cover.
- 3. If paper is caught in the automatic cutter and the printer cover cannot be opened, open the cutter cover as shown below.

4. Then turn the knob until you see *∇* in the opening, as shown in the illustration below. This returns the cutter blade to the normal position. Also notice that there is a label near the cutter to assist you.

- 5. Close the cutter cover.
- 6. Open the printer cover.
- 7. Remove the jammed paper.

#### Auto cutter problems

#### The auto cutter is jammed.

If a foreign object, such as a push pin or paper clip, drops in the auto cutter and causes the auto cutter to lock up, the printer enters an error state and begins the recovery operation automatically.

If the problem is not serious, the auto cutter returns to its normal position without any intervention by the user.

If the auto cutter does not return to its normal position by itself, follow the steps below to correct the problem:

1. Pull the cutter cover toward you so that you can rotate the cutter motor knob.

2. Following the instructions on the label, rotate the knob until the  $\nabla$  appears in the hole.

3. Close the cutter cover.

#### Hexadecimal Dump

This feature allows experienced users to see exactly what data is coming to the printer. This can be useful in finding software problems. When you turn on the hex dump function, the printer prints all commands and other data in hexadecimal format, along with a guide section to help you find specific commands.

To use the hex dump feature, follow these steps:

- 1. After you make sure the printer is off, open the cover.
- 2. Hold down the FEED button while you turn on the printer.
- 3. Close the cover.
- 4. Run any software program that sends data to the printer. The printer prints "Hexadecimal Dump" and then all the codes it receives in a two-column format. The first column contains the hexadecimal codes and the second column gives the ASCII characters that correspond to the codes.

Hexadecimal Dump 1B 21 00 1B 26 02 40 40 .!..&.@@ 1B 25 01 1B 63 34 00 1B .%..c4.. 41 42 43 44 45 46 47 48 ABCDEFGH

- □ A period (.) is printed for each code that has no ASCII equivalent.
- During the hex dump all commands except DLE EOT and DLE ENQ are disabled.
- 5. Open the cover to set the printer off line, so that it will print the last line.
- 6. Close the cover and turn off the printer or reset it to turn off the hex dump mode.

# Chapter 4 **Reference Information**

## Printing Specifications

Printing method:	Thermal line printing
Dot density:	180 dpi × 180 dpi [the number of dots per 25.4 mm (1")]
Printing direction:	Unidirectional with friction feed
Printing width:	72 mm (2.83"), 512 dot positions For 58 mm paper width: 50.8 mm (2"), 360 dot positions
Characters per line (default):	42 (Font A), 56 (Font B); for 58 mm paper width: 30 (Font A), 40 (Font B)
Character spacing (default):	0.28 mm (.01") (2 dots) (Font A) 0.28 mm (.01") (2 dots) (Font B) Programmable by control command.
Printing speed — High-speed mode:	Approximately 120 mm/second maximum (approximately 4.72"/second maximum) 38 lines/second maximum (computed value for 3.18mm (1/8") feed) 28.4 lines/second maximum (4.23 mm (1/6") feed, at 24 V, 28° C (82° F), density level 2) Speed is adjusted depending on the applied voltage to the printer and head temperature conditions automatically.
Printing speed — Low-power- consumption mode:	Approximately 16.5 lines/second (4.23 mm feed (1/6")) Approximately 70 mm/second (approximately 2.76"/second)

#### Printing speed when a ladder bar code is printed:

Approximately 42 mm/ second (approximately 1.7"/ second)

*Notes: Printing speed may be slower, depending on the data transmission* speed and the combination of control commands.

There may be variations in printing after switching the mode of the printing speed. To prevent this for logo printing, it is recommended that you use a downloaded bit image. (Changes in printing speed do not occur during downloaded bit image printing).

Paper feeding speed:	Approximately 120 mm/second (approximately 4.72"/second) continuous paper feeding							
Line spacing (default):	4.23 mm (1/6") Programmable by control command.							
Number of characters:	Alphanumeric characters: 95 International characters: 32							
	Extended graphics: 128 × 7 pages (including one space page) Kanji characters: JIS-Level 1, Level 2 (JIS X0208-1990)							
Character structure:	Font A: $12 \times 24$ (including 2-dot spacing horizontally)							
	Font B: $9 \times 17$ (including 2-dot spacing horizontally)							
	Kanji: $24 \times 24$							
	Font A is the default							
	Standard		Double-height		Double-width		Double-width/ Double-height	
-------------------------	-------------------------------	-----	-------------------------------	-----	-------------------------------	-----	--------------------------------	-----
	W x H in mm (")	CPL	W x H in mm (")	CPL	W x H in mm (")	CPL	W x H in mm (")	CPL
<b>Font A</b> 12 x 24	1.41 x 3.39 (0.06″ x .13″)	42	1.41 x 6.77 (0.06″ x .27″)	42	2.82 x 3.39 (0.11″ x .13″)	21	2.82 x 6.77 (0.11″ x .27″)	21
<b>Font B</b> 9 x 17	0.99 x 2.40 (0.04" x .09")	56	0.99 x 4.80 (0.04″ x .19″)	56	1.98 x 2.40 (0.08″ x .09″)	28	1.98 x 4.80 (0.08″ x .19″)	28
<b>Kanji</b> 24 x 24	3.39 x 3.39 (0.13''x.13'')	21	3.39 x 6.77 (0.13′′x.27′′)	21	6.77 x 3.39 (0.27''x.13'')	10	6.77 x 6.77 (0.27''x.27'')	10

- \* CPL = Characters Per Line
- \* Space between characters is not included
- \* Characters can be scaled up to 64 times as large as the standard sizes.

## Paper Specifications

Paper roll (single-ply):	Size:	Width: 79.5 mm ± 0.5 mm (3.13" ± 0.02") For 58 mm paper width: 57.5 mm ± 0.5 mm (2.26" ± 0.02")
	Maximum outside diameter:	83 mm (3.27")
	Paper roll spool diameter:	Inside: 12 mm (0.47") Outside: 18 mm (0.71") Paper must not be pasted to the paper roll spool.
	Take up paper roll width:	$80\pm^{0.5}_{1.0}\text{mm}~3.15^{\prime\prime}\pm^{0.02^{\prime\prime}}_{0.04^{\prime\prime}}$

Specified thermal paper roll:	NTP080-80 NTP058-80 (for 58 mm paper width) In Japan: Nakagawa, Seisakujo In U.S.A.: Nakagawa Mfg. (USA) Inc. In Europe: Nakagawa Mfg. (Europe) GmbH In Southeast Asia: N.A.K. Mfg. (Malaysia) SDN BHD
	[Original paper: TF50KS-E Nippon Paper Industries Co., Ltd.,]
	The following paper can be used instead of the specified paper above: Original paper: PD 160R (Oji Paper Mfg. Co. Ltd.) Original paper: AF50KS-E (Jujo Thermal Oy (Finland)) Original paper: P350(F380), P310, P300 (Kanzaki Specialty Papers, Inc. (U.S.A.))

## **Electrical Characteristics**

Supply voltage: +24 VDC  $\pm$  7% (optional power supply: EPSON PS-170)

Current Hi consumption: (at mo 24V)	igh-speed ode:	Mean: Approximately 1.7A (character font A α-N all columns printing) Peak: Approximately 7.7A
CO	ow-power- onsumption ode:	Mean: Approximately 1.2A (Character font A α-N all columns printing) Peak: Approximately 6.6A
Sta	andby:	Mean: Approximately 0.2A

*Note: Maximum 1A for drawer kick-out driving* 

## Reliability

Life:	Mechanism:	15,000,000 lines
	Thermal head:	100 million pulses, 100 km
	Auto cutter:	1,500,000 cuts
	(End of Life is defin end of its life when beginning of the We	
MTBF:	360,000 hours (Failure is defined as Random Failure occurring at the time of the Random Failure Period.)	
MCBF:	52,000,000 lines (This is an average failure interval based on failures relating to wearout and random failures up to the life of 15 million lines.)	

## **Environmental Conditions**

Temperature:	Operating:	$5^\circ$ to $45^\circ$ C (41° to 113° F)
	Storage:	–10° to 50° C (14° to 122° F), except for paper
Humidity:	Operating:	10 to 90% RH
	Storage:	10 to 90% RH, except for paper

# Appendix A **DIP Switch and Paper Near End Settings**

Although the factory settings are best for almost all uses, if you have special requirements, you can change the DIP switch or paper near end settings.

## Setting the DIP Switches

### **DIP** switch functions

Your printer has two sets of DIP switches. The functions of the switches are shown in the following tables.

#### Serial interface specifications

Set	1
-----	---

SW	Function	ON	OFF
1-1	Data receive error	Ignored	Prints "?"
1-2	Receive buffer capacity	45 bytes	4K bytes
1-3	Handshaking	XON/XOFF	DTR/DSR
1-4	Data word length	7 bits	8 bits
1-5	Parity check	Enabled	Disabled
1-6	Parity selection	Even	Odd
1-7	Transmission speed (See the table below.)		
1-8			

#### Transmission Speed

Transmission Speed (BPS)-bits per second	1-7	1-8
2400	ON	ON
4800	OFF	ON
9600	ON	OFF
19200	OFF	OFF

#### Set 2

SW	Function	ON	OFF
2-1	Handshaking (BUSY condition)	Receive buffer full Off line or receive buffer	
2-2	Reserved: do not change settings	Fixed to OFF	
2-3	Selects print density	Refer to table below	
2-4			vv
2-5	Reserved: do not change settings	Fixed to OFF	
2-6	Reserved: do not change settings	Fixed to OFF	
2-7	I/F pin 6 reset signal	Enabled	Disabled
2-8	I/F pin 25 reset signal	Enabled	Disabled

#### Print Density Selection

Print Density	SW 2-3	SW 2-4
1 Low power consumption mode	ON	ON
2 (Normal)	OFF	OFF
3	ON	OFF
4 (Dark)	OFF	ON

#### Notes:

- With the optional RS-485 interface, DIP switches 2-7 and 2-8 are disabled.
- Changes in DIP switch settings (excluding switches 2-7 and 2-8 interface reset signals) are recognized only when the printer power is turned on or when the printer is reset by using the interface. If the DIP switch setting is changed after the printer power is turned on, the change does not take effect until the printer is turned on again or is reset.
- If you turn on DIP switch 2-7 or 2-8 while the printer is turned on, the printer may be reset, depending on the signal state. DIP switches should not be changed while the printer power is on.
- If the print density is set to level 3 or 4, the printing will be at low speed.
- In a low power consuption, printing speed is fixed to 70 mm/sec.

#### Parallel interface specifications

#### Set 1

SW	Function	ON	OFF
1-1	Auto line feed	Always enabled	Always disabled
1-2	Receive buffer capacity	45 bytes	4K bytes
1-3~ 1-8	Undefined	_	_

#### Set 2

SW	Function	ON	OFF
2-1	Handshaking (BUSY condition)	<ul><li>Receive buffer full</li><li>Reading data</li></ul>	<ul><li>Off-line</li><li>Receive buffer full</li><li>Reading data</li></ul>
2-2	Reserved (Do not change settings)	Fixed to Off	
2-3	Selects print density	Refer to table below	
2-4			
2-5~ 2-7	Reserved (Do not change settings)	Fixed to Off	
2-8	I/F pin 31 reset signal (Do not change settings)	Fixed to On	

#### Print Density Selection

Print Density	SW 2-3	SW 2-4
1 Low power consumption mode	ON	ON
2 (Normal)	OFF	ON
3	ON	OFF
4 (Dark)	OFF	OFF

#### Notes:

- Changes in DIP switch settings (excluding switch 2-8 interface reset signal) are
  recognized only when printer power is turned on or when the printer is reset
  using the interface. If the DIP switch setting is changed after printer power is
  turned on, the change does not take effect until the printer is turned on again
  or is reset.
- If you turn on DIP switch 2-8 while the printer is turned on, the printer may be reset, depending on the signal state. Do not change DIP switches while the printer power is on.
- If the print density is set to level 3 or 4, the printing will be at low speed.
- In a low power consumption, printing is fixed to 70 mm/sec.

## Changing the DIP switch settings

If you need to change settings, follow the steps below to make your changes:

Turn off the printer before removing the DIP switch cover to prevent an electric short, which can damage the printer.

- 1. Make sure the printer is turned off.
- 2. Remove the screw from the DIP switch cover. Then take off the DIP switch cover, as shown in the illustration below.

- 3. Set the switches using a pointed tool, such as tweezers or a small screwdriver.
- 4. Replace the DIP switch cover. Then secure it with the screw.

The new settings take effect when you turn on the printer.

## Adjusting the Paper Near End Detector

The paper near end detector detects when paper is almost gone by measuring the diameter of the paper roll. The detector has two settings.

Because of variations in paper roll cores, it is not possible for the detector to measure the exact length of the paper left on the roll when the detector is triggered. Of the two settings, the factory setting (lower) leaves the least amount of paper on the roll when the sensor is triggered. If you want more paper left, change the setting as described below.

#### Note:

The factory setting is based on a paper roll core with an outside diameter of 18 mm (0.71") and an inside diameter of 12 mm (0.47"). If you use a paper roll with a core with an outside diameter of more than 18 mm, it is better to change to the upper setting, as described below.

- 1. Open the printer cover, and remove the paper roll.
- 2. Loosen the adjusting screw and move the tab up to the upper setting.

- 3. Tighten the adjusting screw, and check to be sure that the detecting lever moves freely.
- 4. Replace the paper roll.
